Projects

The Bashful Diner | **Technologies**: HTML, CSS, Bootstrap, JavaScript, Sequelize, Express, node.js, Handlebars | **Deployed App**: thebashfuldiner.com

This app will randomly generate a password based on preferences determined by the user including character length and the inclusion or omission of lowercase letters, uppercase letters, numbers, and special characters.

WillWeather | **Technologies**: HTML, CSS, JavaScript | **Deployed App**: hhhhhaaaa.github.io/WillWeather

WillWeather is a weather forecast activity planning app, which uses API data to fetch 5 day & 12 hour forecast data based on location. The main goal of this app is to assist users as a weather forecaster and day planner to plan out their daily outdoor activities.

Weather Dashboard | **Technologies**: HTML, CSS, JavaScript | **Deployed App**: laurenzel93.github.io/weather-dashboard

This app allows users to search for a city of their choosing so that they may view the current and 5-day weather forecast which includes temperature, humidity, wind speed, and UV index. Previous city searches are also saved in local storage.

Password Generator | **Technologies**: HTML, CSS, JavaScript | **Deployed App**: laurenzel93.github.io/password-generator

This app will randomly generate a password based on preferences determined by the user including character length and the inclusion or omission of lowercase letters, uppercase letters, numbers, and special characters.
